EDUCATION

Oregon State University — Mar 2022 - Mar 2027 (Expected)
Ph.D. in Electrical & Computer Engineering/Artificial Intelligence — Corvallis, OR, US
Focus area: Information Theory, Machine Learning, Neural Data Compression

Oregon State University — Corvallis, OR, US
M.S. in Electrical & Computer Engineering — Dec. 2024
Thesis: *On Minimizing Symbol Error Probability using Beamforming in MIMO Wiretap Channels*

TECHNICAL SKILLS

- **ML/AI:** Image/Video Compression, Computer Vision, Generative Models, Large Language Models, Multi-Agent AI
- **Quantitative Research:** Mathematical Modeling, Optimization, Statistics & Probability Theory
- **Programming:** Python, MATLAB, C/C++
- **Frameworks/Tools:** PyTorch, TensorFlow, CompressAI, CVX

RESEARCH INTEREST

- **Information theory & machine learning:** Lossy compression, rate-distortion-perception theory, neural data compression, representation learning.
- **Wireless communications & networks:** Signal processing, optimization, and machine learning for advanced MIMO communication systems, beamforming techniques.
- **Free-space quantum key distribution networks:** Design, analysis, and optimization of link-layer retransmissions and relaying techniques.

WORK EXPERIENCE

Research Assistant | Oregon State University — Mar 2022 - Present

Cross-Domain Lossy Compression via Rate- and Classification-constrained Optimal Transport (OT)

- Developed a novel compression framework integrating bit-rate, distortion, classification, and perception constraints to improve robustness across domains.
- Implemented deep learning models (VAE, W-GAN, CNN) with differentiable quantization and entropy-constrained losses for image super-resolution, denoising, and inpainting.
- Validated on MNIST, SVHN, CIFAR-10, ImageNet, and KODAK datasets, achieving strong alignment between theoretical tradeoffs and real-world performance.

Universal Rate-Distortion-Classification (RDC) Representations for Lossy Compression

- Designed a trainable RDC objective that couples bit-rate, distortion, and task accuracy to learn semantic representations useful for compression and downstream inference.
- Built PyTorch training compression models (VAE, W-GAN, CNN) with differentiable quantization and entropy-constrained losses; produced RDC curves.
- Demonstrated that the learned latent acts as a compact feature codec supporting classification with minimal loss versus specialized encoders.

Perception-enhanced Zero-Shot Denoising via Neural Compression

- Developed a patch-based, data-free denoiser in PyTorch that optimizes a compression-style objective on a single noisy image, balancing rate, distortion, and perceptual quality.
- Incorporated perception terms and an adversarial critic (W-GAN on clean patches) to trace rate-distortion-perception curves on natural images with Gaussian/Poisson noise.

Design and security analysis of symbol error probability-based beamforming in Gaussian MIMO wiretap

- Formulated a mathematical model and signal design, and proposed a novel low-complexity algorithm utilizing KKT conditions, generalized eigen-decomposition, and projected gradient descent.
- Conducted numerical experiments in MATLAB to evaluate the proposed beamforming scheme and analyzed results.

Machine Learning Research Intern | Deakin University   Jul 2025 - Sep 2025

AI agentic negotiation
- Extended a multi-agent negotiation evaluation framework; automated experiments, logging, and reproducibility across local models (e.g., LLaMA/Qwen families).
- Implemented belief updates and offer-counteroffer dynamics; designed metrics and dashboards for comparative analysis.

Research Assistant | Posts and Telecommunications Institute of Technology   Mar 2019 - Mar 2023

Design and Security Analysis of Satellite-based Free-Space Quantum Key Distribution (QKD) Systems for Wireless and Vehicular Networks
- Designed and evaluated satellite-based QKD architectures, incorporating link-layer retransmissions, relaying schemes, and security performance metrics.
- Conducted MATLAB-based simulations to quantify performance and validate analytical results.

AWARDS & HONORS

- NSF Student Travel Grant, AERPAW Spring Workshop – North Carolina State University   2025
- Graduate School's Scholarly Presentation Award – Oregon State University   2024, 2025
- Second Prize, National Scientific Research Contest   2020
- Second Prize in Physics – Provincial Excellent Student Competition, Vietnam   2012
- First Prize in Physics – School-Level Excellent Student Competition, Vietnam   2011, 2012, 2013
